"PLASMA DONATION"

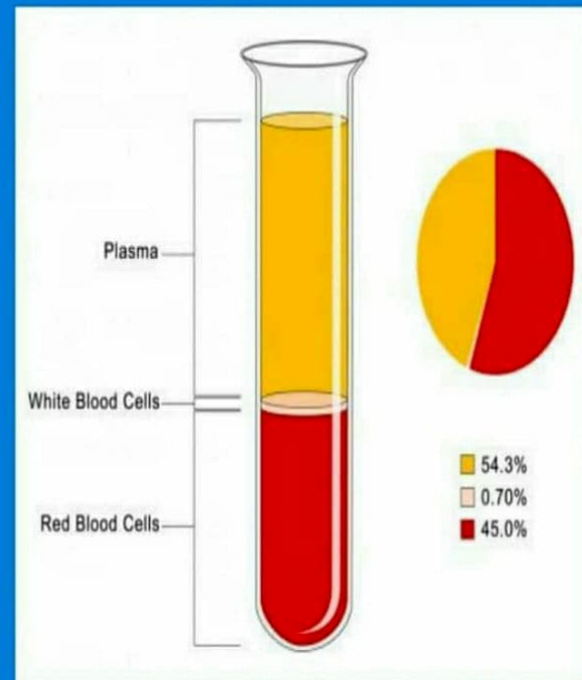

What is Plasma ?

Plasma is a fluid that carries the blood components throughout the body.

@help.for.good

Along with water, salt and enzymes plasma also contains important component which includes 'Antibodies'

@help.for.good

Why Should you Donate Plasma ?

@help.for.good

Blood Plasma is the 'yellowish liquid' component of blood that holds the blood cells of whole blood in suspension.

It carries the antibodies which is exactly what we need to treat Covid-19 patients.

@help.for.good
